

Complex research powered by a simple tool

Research and development partner seeks a seamless transition to a more powerful solution

Founded in 2000, Ibility is a European research and development partner for public and private organisations. Using a people-first approach, it has developed a substantial research portfolio in human resources and the labour market. Ibility's services enable new answers to old problems – ranging from preventing sick leave and empowering school leavers to converting underused skills into regional potential.

CHALLENGE

Simple tools for complex tasks

Carrying out action research in two Swedish offices and with research and development partners all over Europe requires agile tools that simply work – without stealing focus. The tools have to be straightforward for everyone involved to use and be able to adapt as new knowledge appears. Ninox has grown to become the core of Ibility's delivery and development efforts, enabling easy adaptation to specific partner requirements.

An easy choice presented itself

When Ibility's previous database Bento was discontinued, Ibility scanned the market for alternatives. It was essential to get a seamless transfer that would not interfere with critical research and development work. Ninox soon stood out as the obvious choice – equally straightforward but more powerful and even providing a tool for the transfer. Today, Ibility uses Ninox as an on-site solution that continually develops together with Ibility's services.

Key Features

- ✓ Data management
- ✓ Process management
- ✓ Data import

Benefits

Being a development partner in a field with significant economic and human stakes carries the responsibility of delivering industry-leading solutions. Seemingly minor enhancements can make a substantial difference in the lives of people, businesses, and communities. Ninox allows Ibility to stay agile. An idea presented in a morning meeting can be implemented, tested, and evaluated before the end of the workday.
