In good company

The challenge

To remain competitive, successful companies need effective and powerful systems to support employees, customers, projects (e.g. CRM, finance, HR or ERP) in the context of digitalization.

However, many processes are often still mapped using Excel in combination with other tools. This leads to high manual effort and intransparency.

Existing software tools were mostly not flexible and integrated.

Data processing and exchange were complex, costly and error-prone. Structured collaboration in real time, in the mobile application and a high level of clarity could hardly be combined.

The development of new, custom-fit solutions is lengthy and expensive.

Your solution

Your advantages

Ninox can be used in the cloud across devices via the browser or the app

Ninox replaces the use of multiple Excel spreadsheets and software tools

Ninox unifies and standardises individual workflows
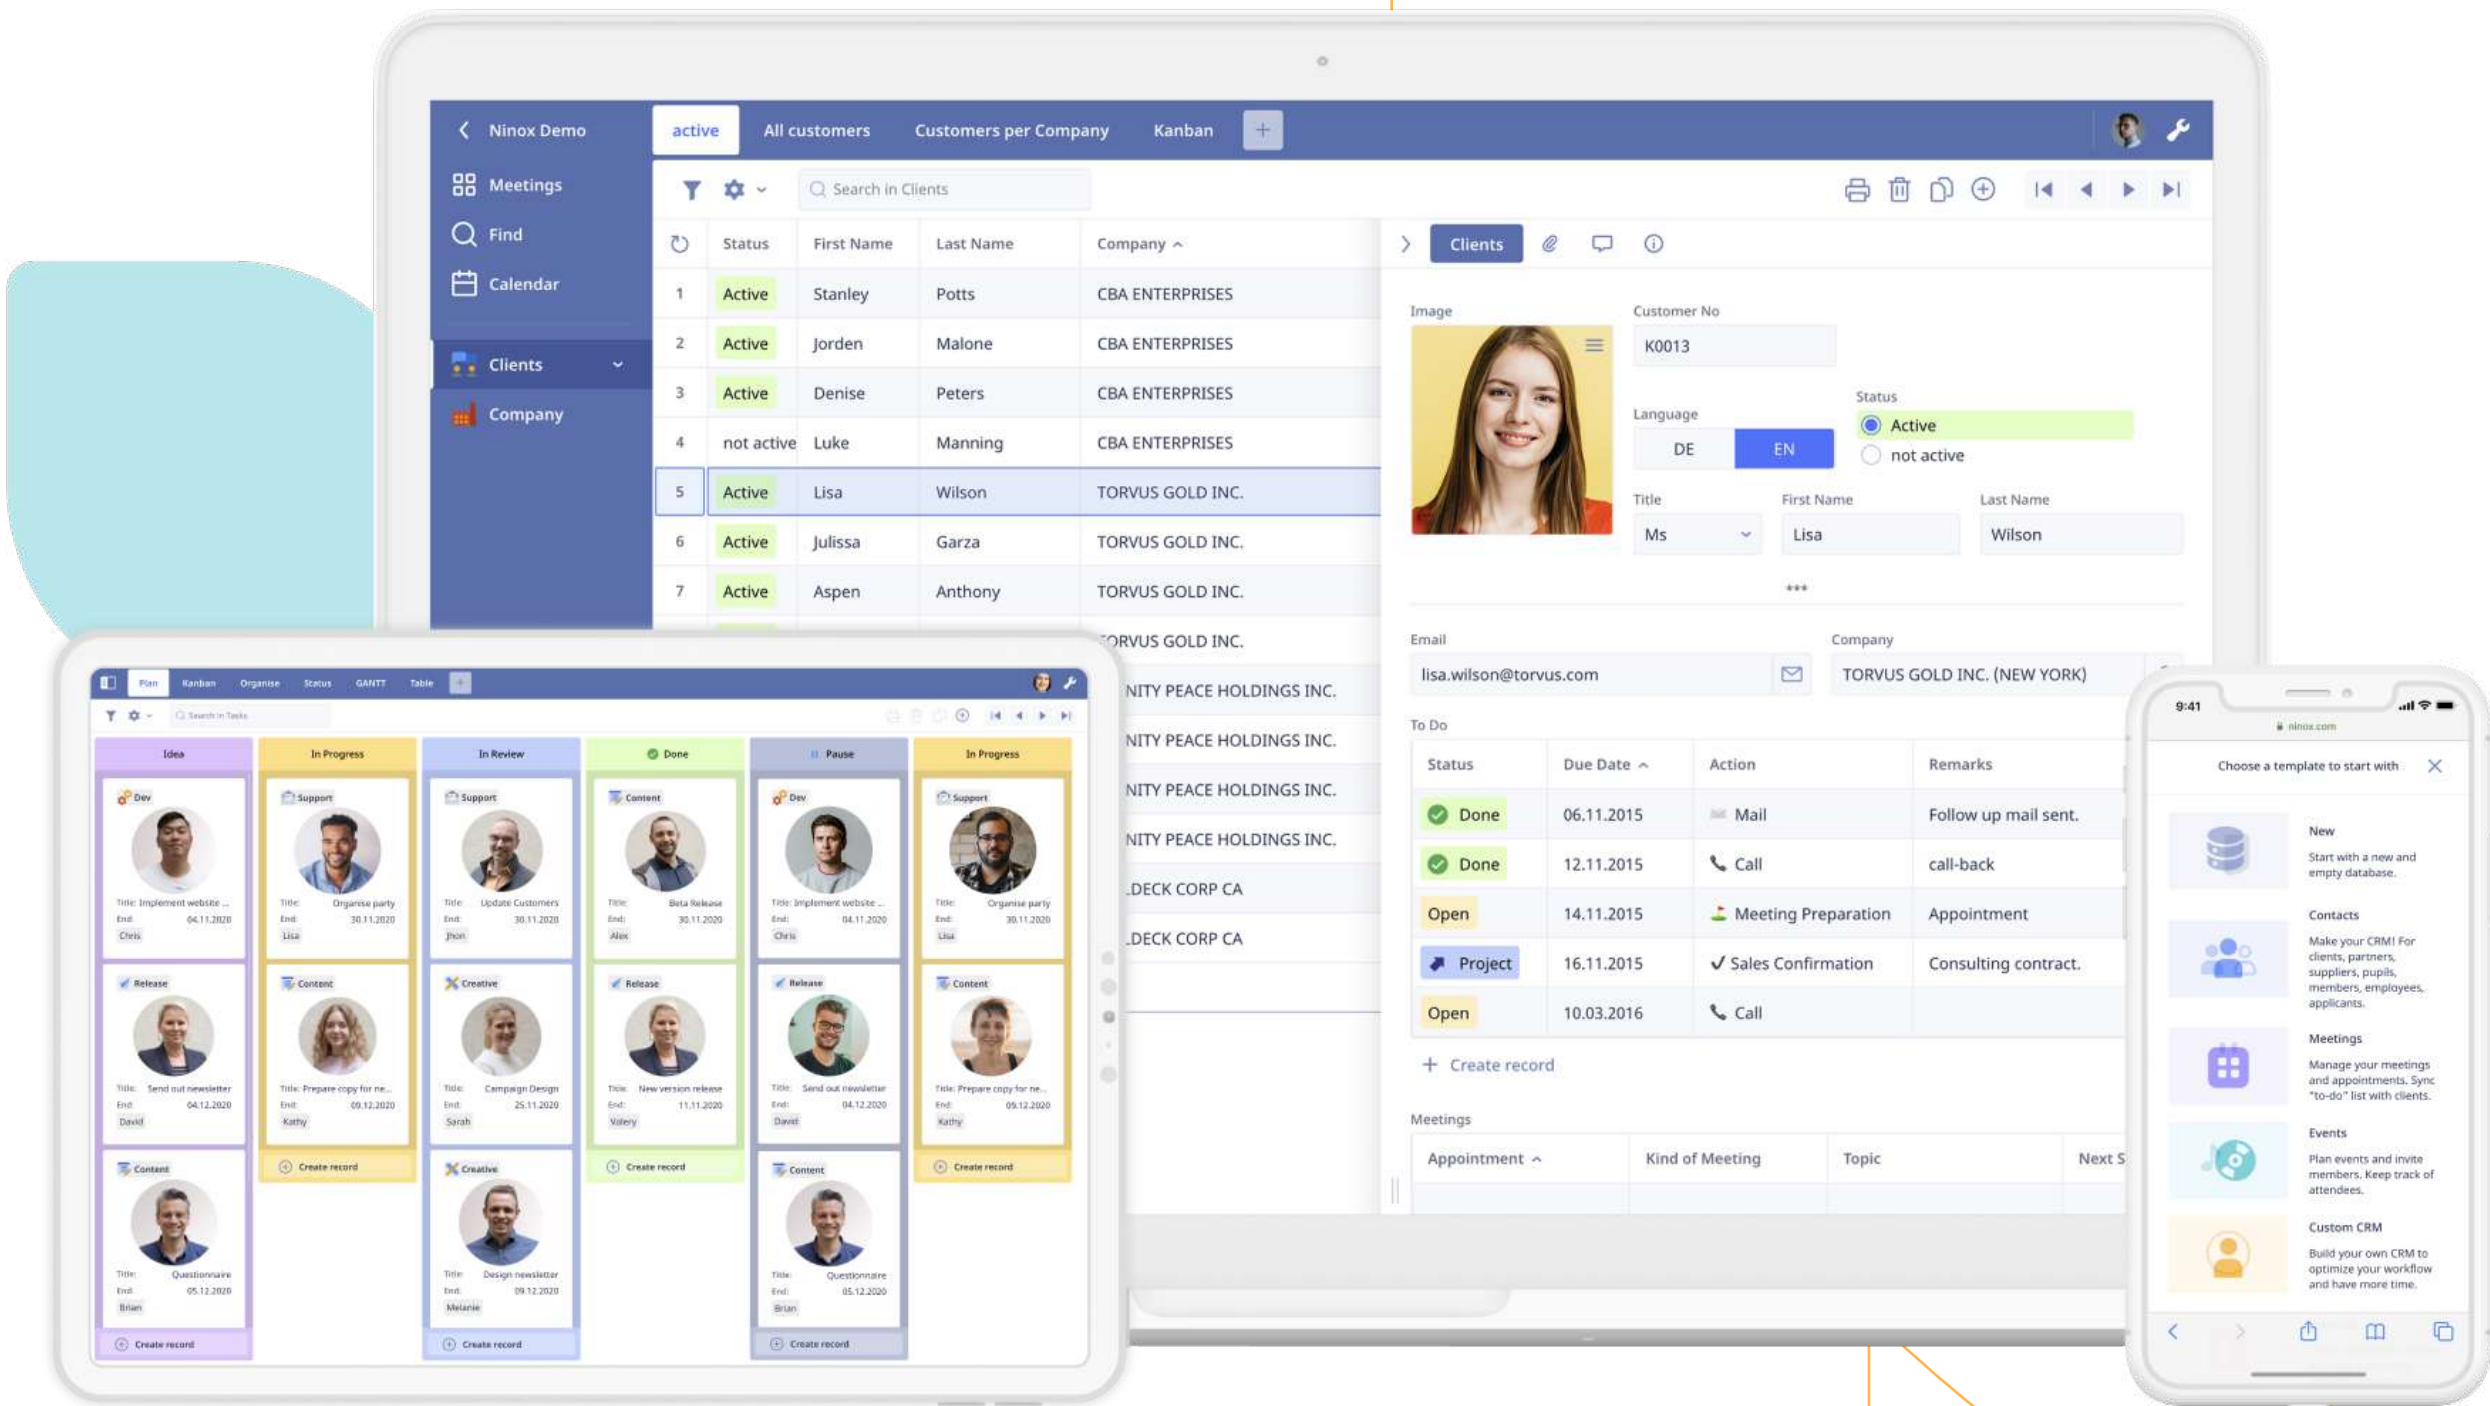

Ninox requires no code / developer knowledge

Time saving through less manual effort

Higher security through standardised, flexible and easy to design procedures

Complete transparency through tracking of activities and interactions

Highest flexibility through individual design options

Intuitive
Modular software applications

With Ninox you design your required database and software applications intuitively according to the modular principle.

The code is generated automatically in the background.

Flexible
Integration into the existing IT structure

With Ninox you can easily map individual requirements.

Seamless integration into the existing IT structure is easily possible.

Ninox is designed to be particularly powerful for creating enterprise-grade applications.

Efficient

Develop workflows together as a team and implement them in a timely manner

With Ninox, teams can develop software applications for their workflow together with the IT department and implement them in a timely manner.

Cost-saving
Realise projects faster and cheaper

BENEFITS

Ninox enables you to realise your projects faster and cheaper, so that your teams can focus on what really matters:

Your business success.

USE CASE

Challenge

"BürgerEnergie Rhein-Sieg eG" plans, builds and operates plants for the use of renewable energies and also markets the generated energy itself. Its members are citizens, municipalities and companies in the region. The diverse and complex administrative tasks place a heavy burden on the voluntary board.

Solution

With Ninox, a management solution was developed with which almost all processes, from master data management to contract and project management to invoicing, can be handled much more efficiently. Diverse evaluations ensure transparent decision-making processes that can also be documented in a legally compliant manner.

Features: *Contact administration*   *Project management*   *Documentation*

> *With Ninox, we have managed to work 100 per cent paperless.*

Viktor Wiebe, Managing Director, Solar Wiebe

Sales/Year

Challenge

Solar Wiebe GmbH & Co. KG from Gummersbach is a specialist company for photovoltaic systems. Managing director Viktor Wiebe found classic tradesmen's software too inflexible and inefficient, which is why he relied on his own development with Ninox to organise his growth-oriented company from the very beginning.

Solution

Wiebe's solution was developed in several phases and now covers all business areas and processes: Warehouse management, ordering, personnel and project planning, construction site management, time recording and invoicing. Quotations with cent-precise calculation and profitability calculation take only a fraction of the time with Ninox.

Features: *Order management*   *Project management*   *Cost calculation*

> *We were real Excel junkies. Now we are convinced Ninox freaks.*

Anica Juch, Assistant to the Management, BSH Energie

Challenge

BSH GmbH & Co. KG is a nationwide specialist company for photovoltaics. Since the existing tradesmen's software only inadequately depicts the complex project management, countless Excel spreadsheets were also kept and mostly exchanged between those involved by e-mail. In the process, the overview was lost more and more often.

Solution

In order to make the project and construction site management processes more efficient, BSH decided to replace the temporary Excel system with a customised Ninox solution. With this, all master and project data are now stored centrally and can be accessed at any time by all those involved anywhere, including on site at the customer's premises and on the construction site.

Features: *Project management*   *Construction management,*   *Process mapping*

Our customers use the ninox app for the following tasks

- Process Management
- Material Management
- Construction Planning
- Product Data Management
- Construction Management
- Channel Management

- Task Management
- Order Management
- Buildung Yard Management
- Contact Management
- Warehouse Management
- Equipment Management

- Employee Management
- Material Documentation
- Personnel Management
- Material Order
