As of: 09/2020   Survey on Capterra: September 2020

In good company

The challenge

To remain competitive, successful companies need effective and powerful systems to support employees, customers, projects (e.g. CRM, finance, HR or ERP) in the context of digitalization.

However, many processes are often still mapped using Excel in combination with other tools. This leads to high manual effort and intransparency.

Existing software tools were mostly not flexible and integrated.

Data processing and exchange were complex, costly and error-prone. Structured collaboration in real time, in the mobile application and a high level of clarity could hardly be combined.

The development of new, custom-fit solutions is lengthy and expensive.

Your solution

Your advantages

SITUATION IN THE COMPANY

Ninox can be used in the cloud across devices via the browser or the app

Ninox replaces the use of multiple Excel spreadsheets and software tools

Ninox unifies and standardises individual workflows
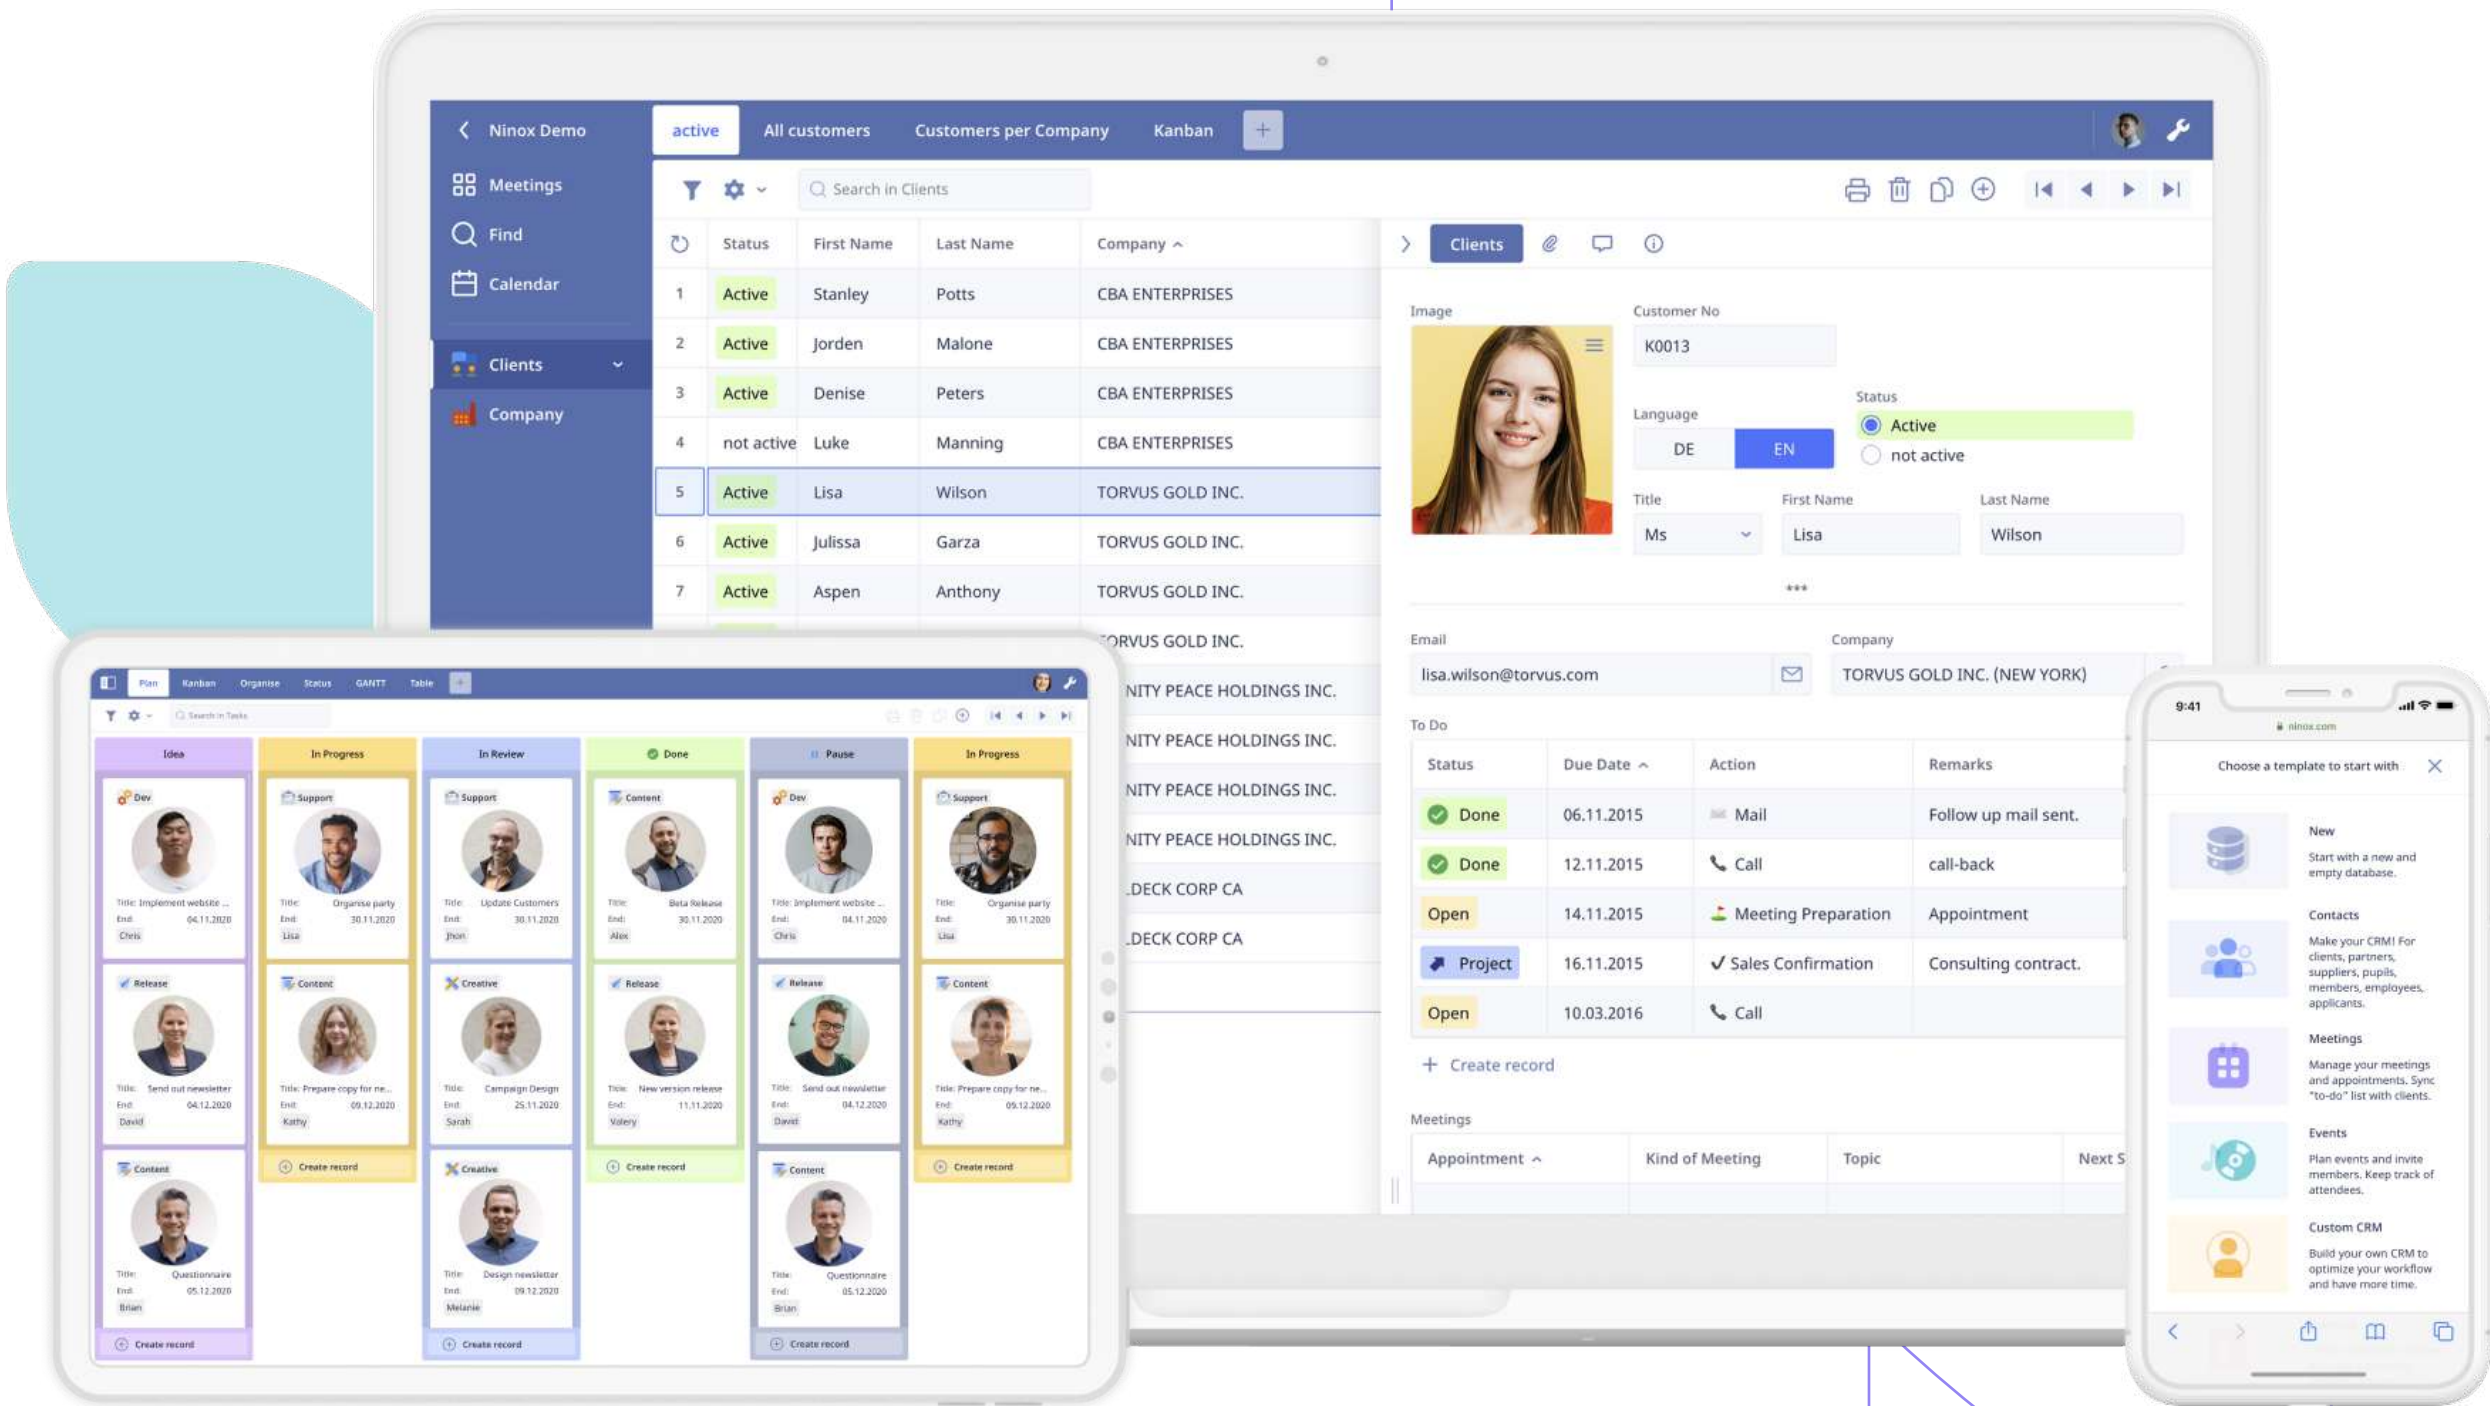

Ninox requires no code / developer knowledge

Time saving through less manual effort

Higher security through standardised, flexible and easy to design procedures

Complete transparency through tracking of activities and interactions

Highest flexibility through individual design options

Intuitive
Modular software applications

With Ninox you design your required database and software applications intuitively according to the modular principle.

The code is generated automatically in the background.

Flexible

Integration into the existing IT structure

With Ninox you can easily map individual requirements.

Seamless integration into the existing IT structure is easily possible.

Ninox is designed to be particularly powerful for creating enterprise-grade applications.

Efficient

Develop workflows together as a team and implement them in a timely manner

With Ninox, teams can develop software applications for their workflow together with the IT department and implement them in a timely manner.

Cost-saving
Realise projects faster and cheaper

Ninox enables you to realise your projects faster and cheaper, so that your teams can focus on what really matters:

Your business success.

Ninox customer success stories

Real-time synchronisation

Central data storage

Project management

> *With Ninox, data retrieval is easy. All information is in one place, so employees work on the latest data from different locations.*

Martin Baeuerle, Office Manager, Cundall

CUNDALL

40+
years

20
locations

900+
employees

Challenge

Cundall Johnston and Partners is an international consulting company specializing in interdisciplinary engineering services in the fields of construction, logistics, infrastructure and automation. Cundall employs over 900 people worldwide at 20 locations in Europe, the Middle East and North Africa, Asia and Australia.

Solution

Project management has to take into account local regulations and customs for each location. This generates large amounts of data, which is why Cundall discarded its Excel lists and instead used Ninox to develop a central, efficient solution that can be flexibly adapted to different requirements.

Features: *Project Management*   *Process Management*   *Database*

> *Ninox, paired with Nioxus' products, allows all the i's to be dotted and t's crossed.*

Mark Brown, CEO, Memsco

Memsco

3
integrations

50%
time saved

1
solution

Challenge

Memsco is a medical services company based in California. Activities focus on medical assessments of injuries for recognition as workers' compensation. The workflows were very paper-heavy, but HIPAA-compliant software solutions were too expensive and inflexible.

Solution

With the support of the us Ninox partner Nioxus, MEMSCO developed an individual solution for the legally compliant handling of processes. For document management, scheduling and data evaluation, tools developed by Nioxus for the Ninox platform were integrated, which once again significantly expand the range of functions.

Features: *Central Data Storage*   *Report Generation*   *Data Management*

> *Ninox allowed us to take ideas from our team and convert them into effective solutions for our customers.*

Quinton GoForth, Managing Partner, Triad Unlimited

100+
spreadsheets

$300K
time saved

60
hours/week saved

Challenge

Triad Unlimited is a global asset management service provider. Its clients include life science companies involved in the development of COVID-19 vaccines. The efficiency required in the process could not be achieved with the Excel-based processes used until then. Therefore, Triad completely reorganised itself with Ninox.

Solution

Around 100 quite complex Excel tables were transferred to Ninox and provided with the required functionality within a short time. All data is now always up-to-date in the central database and can be used by all participants at different locations. Triad estimates the time savings achieved at around $300,000.

Features: *Project management*   *Data analytics*   *Risk analysis*

Our customers use the ninox app for the following tasks

- Process Management
- Material Management
- Construction Planning
- Product Data Management
